

## Sri Comforts — Solutions by Sector

Sri Comforts provides sector-specific HVAC solutions across South India. Each solution combines design, installation, commissioning, and AMC.

---

### Commercial HVAC (/solutions/commercial)

For offices, retail parks, commercial campuses, and multi-tenant buildings.

Challenges addressed:

- Multi-zone complexity and hot/cold spots
- Peak load variability through the day
- Diverse facility types needing tailored ducting / VRF / maintenance
- High uptime expectations from tenants and facility managers

Capabilities:

- VRF system design (AutoCAD layouts, occupancy- and budget-aware)
- Precision installation with phased work in occupied buildings
- AMC with scheduled inspections and rapid response
- Ducting and airflow optimization
- Lifecycle support (warranty management, retrofits)

Example use cases:

- Office tower retrofit (split → centralized VRF)
  - Multi-tenant campus standardization of AMC
  - Energy audit and upgrade
  - New commercial fit-out (design to commissioning)
- 

### IT Services HVAC (/solutions/it-services)

For data centers, server rooms, NOCs, and tech campuses.

Challenges:

- High heat density at rack level
- 24/7 uptime / failover needs
- Humidity and filtration control for electronics
- Rapid scaling as racks are added

Capabilities:

- Precision AC (in-row / perimeter) sized to rack layout and redundancy
- N+1 / redundant design so maintenance does not mean downtime
- Monitoring and priority AMC for IT clients
- Hot/cold aisle planning and containment-aware airflow
- Expansion-ready modular designs

Example use cases:

- Server room build-out
  - Data hall retrofit from comfort cooling to precision cooling
  - NOC / operations center comfort + adjacent IT loads
  - Tech campus AMC standardization
- 

## **Industrial & Pharma (/solutions/industrial-pharma)**

For clean rooms, cold storage, regulated plants, and manufacturing floors.

Challenges:

- Clean room particle / pressure / HEPA requirements
- Cold room / process temperature control
- Validation documentation for audits
- Industrial heat loads and ventilation

Capabilities:

- Clean room HVAC aligned to classification with documented commissioning support
- Cold room refrigeration with preventive maintenance
- Industrial ventilation / exhaust / makeup air
- Audit-ready AMC (logs, spare-parts traceability)
- Phased retrofit and expansion while production continues

Example use cases:

- API manufacturing zones
  - Warehouse cold chain
  - Packaging clean rooms
  - Heavy industry production halls
- 

## **Healthcare HVAC (/solutions/healthcare)**

For hospitals, clinics, labs, and diagnostic facilities.

**Challenges:**

- Infection control (pressure relationships, filtration)
- Continuous operation / redundancy
- Mixed-use complexity (OPD, wards, diagnostics, admin)
- Quiet, stable patient comfort

**Capabilities:**

- OT and critical-zone HVAC
- Isolation and ICU pressure-room support
- Redundant / priority AMC for hospitals
- Energy-efficient upgrades without compromising air quality standards
- Expansion of wings / diagnostic blocks with minimal disruption

**Example use cases:**

- Multi-specialty hospital campus HVAC + centralized AMC
- Diagnostic labs
- Clinic chains with standardized installs
- Renovation in occupied healthcare buildings

**Hospitality & Retail (/solutions/hospitality-retail)**

For hotels, restaurants, banquet spaces, and retail.

**Challenges:**

- Guest perception and reviews tied to comfort
- Peak loads (kitchens, banquet, retail rush)
- Aesthetic / noise constraints
- Multi-outlet consistency for chains

**Capabilities:**

- Quiet VRF for guest rooms and premium retail
- Kitchen and back-of-house ventilation / makeup air
- Lobby and public-area high-capacity cooling
- Chain-wide AMC
- Renovation support with minimal guest disruption

**Example use cases:**

- Boutique hotels
- Restaurant groups
- Flagship retail

- Banquet and event spaces
- 

## Residential (/solutions/residential)

For homes, villas, duplexes, and apartments.

Challenges:

- Wrong-sized units (short cycling, humidity, high bills)
- Poor installation quality
- Rising energy costs on older units
- Difficulty finding authorized, trustworthy technicians

Capabilities:

- Tonnage / room-by-room assessment (free sizing consultation messaging on site)
- Authorized installation following manufacturer standards
- VRF for large homes / multi-zone villas
- AMC and seasonal pre-summer service (24hr response messaging on AMC)
- Honest repair-vs-replace guidance

Example use cases:

- New villa / whole-home VRF with architect coordination
- Apartment upgrade to efficient inverter units
- Dedicated home-office zones
- Pre-summer tune-up

Website tool:

- Free AC Tonnage Calculator: </resources/ac-tonnage-calculator>
- Note: the calculator is a planning aid; final sizing should be confirmed by Sri Comforts after a proper assessment.
